Dear Hans,

of course you are allowed to use any material than we public on our website as long as you mention the source explicitly.

Please find enclosed a picture of our Z1-16 decoder with signal extension that will be presented at Nuremberg toy fare first time. This decoder is able to generate signal aspects for far more than 200 different signal configurations including Dutch, Belgian and Luxembourg ones - besides all Swiss, Austrian and German signaling systems.

Best Regards

Thomas Leitner
